

SCATI ANALYTICS

SCATI ANALYTICS

REVOLUTIONIZING VIDEO MONITORING WITH INTELLIGENCE

▶ Video analytics using AI and deep learning

ONVIF®

PROACTIVE THREAT DETECTION

AI can identify unusual behavior and potential threats in real time enabling rapid response before incidents escalate.

REDUCTION OF FALSE ALARMS

Thanks to sophisticated algorithms, the system significantly reduces false alarms, allowing the user to concentrate his resources on true and relevant alerts.

ADVANCED BEHAVIORAL ANALYSIS

Beyond mere observation, behavioral patterns are analyzed, helping to predict situations before they occur, optimizing security management.

CONTINUOUS IMPROVEMENT

SCATI ANALYTICS continuously learns from the data collected, improving its efficiency and accuracy over time.

SCALABILITY

It can be scaled to fit any any size facility, from small businesses to large enterprises.

SCATI VISION SOFTWARE LICENSE

Allow any professional operator to exploit all the functionalities they need.

VIDEO ANALYTICS

SCATI ANALYTICS

In a world where information is power, advanced video analytics has become an essential tool for any organization to stay ahead in security and competitiveness. Thanks to artificial intelligence and deep learning, video analytics can extract key information from video surveillance systems, significantly improving decision making.

SCATI ANALYTICS is an advanced solution that offers security professionals access to real-time data, optimizing monitoring and incident management. With SCATI VMS (Video Management System), alarms generated by SCATI ANALYTICS are configured and centralized on a single platform, facilitating access to all the necessary tools.

SCATI's VMS allows you to review the complete history of alarms received, providing immediate access to the corresponding frames or videos, which can be viewed directly in the application or downloaded for detailed analysis.

This solution not only optimizes security management, but also reduces operating costs by personalizing alerts and reducing the number of false alarms. This optimizes the use of resources and improves the response to any incident. In addition, SCATI ANALYTICS boosts business intelligence, maximizing operational efficiency and enabling users to anticipate events, thanks to accurate, real-time data that promotes more informed and strategic decisions.

Server-side video analytics

Based on an advanced analytics engine using Deep Learning and Artificial Intelligence, this system allows you to simultaneously process multiple video streams from any camera in your facility, providing unprecedented added value.

 Barcode/QRs reading	 Abandoned object	 Object classification	 Line crossing	 Wandering	 Crowds	 Color of objects	 Motion detection
 Stolen object	 Intrusion	 Falls	 Optical Character Recognition (OCR)	 Directional alarm	 Running people	 Tampering	 People counting

Revolutionizing video monitoring with AI

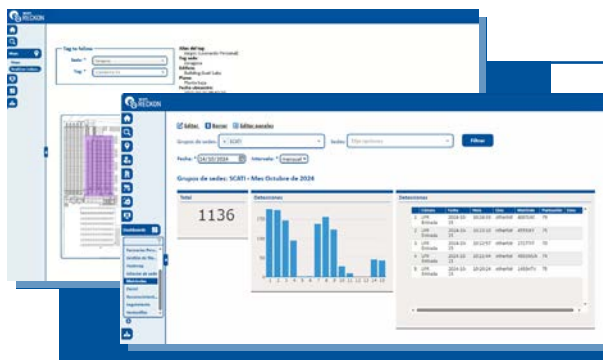

SCATI ANALYTICS transforms passive video surveillance systems into proactive management tools. These systems can perform real-time monitoring, detect intrusions, identify suspicious behavior and classify objects with unprecedented accuracy and efficiency.

Beyond security, SCATI ANALYTICS offers immense added value in the area of business intelligence. By analyzing patterns of movement and behavior, companies can gain insight into customer behavior, operational efficiency and much more. For example, tracking and classifying people and vehicles can reveal traffic patterns within a retail space, which in turn can inform decisions about store design, product placement and promotions.

Business Intelligence

SCATI RECKON is SCATI's BI platform that centralizes and analyzes data to deliver valuable information through graphs and balanced scorecards. Under a single platform, the company can centralize decision-making, have a precise location of its assets, be able to implement the traceability of the goods in its facilities or, ultimately, improve operational efficiency.

Creation of dashboards

SCATI RECKON allows the creation of dashboards and graphs with the different metadata received from the SCATI ANALYTICS servers, to better manage your systems.

Smart searches

Perform searches in a web environment without the need to install desktop applications.

Reports

Generate detailed reports that facilitate decision-making.

SCATI

BEYOND SECURITY

**Technological
pioneers**

**Consulting
experts**

**Global
experience**

Headquartered in Spain, SCATI has subsidiaries in Mexico and Brazil, and has a wide network of Certified Partners that offer services locally, with the same levels of quality and commitment that characterize the company.
